

Priority Goal #2: Develop a water reduction plan and begin implementation by January 2017. Short term: Reduce the rate of depletion of the aquifer within five years to sustain the economy, but begin implementation of conservation immediately. Long term: By evaluating success every five years, determine if conservation measures are achieving a reduced rate of depletion. (Rationale: Within each five year evaluation period new technologies and crop varieties as well as additional sources of supply will be more and more available.)

Action Steps

- ❖ Work with NRCS to evaluate effectiveness of RCPP program and find efficiencies.
- ❖ Work with GMD No. 1 in creating a quarterly newsletter to members; include updates from within district and involving water agencies.
- ❖ Create a fall event for education of water conservation, involve water agencies and schools.
- ❖ Promote conservation through possible incentives and increased data availability.
